

IMPLEMENTATION SCIENCE MASTERCLASS 2022

Scale up of non-communicable disease programmes

Homework 1

Deadline: Week 2 group session

Each team is allocated another team’s project concept to review.

Please read the project concept and consider the following questions **as a team** (not individually):

- What are three components of the project concept that are strong, innovative, or particularly interesting to you and why?
- What are three components of the project concept that require strengthening and why?
- What three questions do you have for the project concept authors?

Each team should prepare their answers and be ready to share them as part of a group discussion during the **Week 2 group session**. You are *not* required to submit a written paper.

All project concepts can be found in the participant handbook. The homework task should take less than one hour to complete.

Reminder: These are project concepts, not full proposals, so your peer review should focus on general concepts and questions, rather than a detailed critique.

As additional reading, you may find it helpful to be aware of the NIH request for application guidance: [RFA-HL-20-005: Late-Stage Implementation Research Addressing Hypertension in Low- and Middle-Income Countries: Scaling Up Proven-Effective Interventions \(UG3/UH3 Clinical Trial Optional\) \(nih.gov\)](#)
